Backup as a Service

A flexible, efficient and cost-effective way to safeguard your data with a cloud-based backup and recovery service.

APH Backup as a Service provides a reliable, managed and centralised backup solution for your corporate data and requires minimal infrastructure buildout.

From lost budgets and financials to hundreds or thousands of lost mailboxes, patient records, and invoices – data backup and recovery might not be the most glamorous side of IT, but the sigh of relief when lost files are rescued from the abyss is like no other.

Today, increasing amounts of corporate applications and data are being processed in the cloud. With every new cloud service that a business consumes, the total amount of content that needs to be stored and accessed grows exponentially.
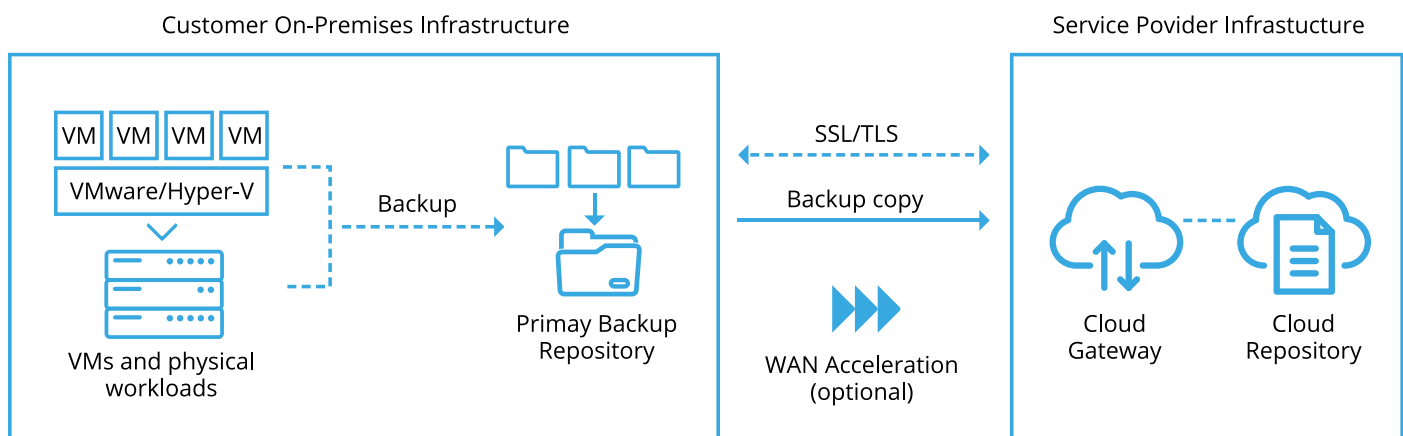

You may already be backing up your data on-premise, but only offsite cloud backups provide the highest level of data protection and redundancy. Powered by Veeam Cloud Connect, APH's cloud backup solution is a simple, affordable and secure way to guarantee data protection.

Key features

With APH Backup as a Service, you can back up your data safely, avoid the need to overprovision and pay only for what you use. You'll benefit from improvements in backup technology without capital outlay, personnel re-skilling or costly business disruptions.

Key features include:
- Instant online deployment
- End to end encryption
- Operational backup with next-generation data protection storage
- Offsite replication
- Remote office protection
- Defined SLAs
- Support for industry-leading private, hybrid and public cloud storage
- VEEAM portal management
- Secured in world-class data centres
- De-duplication and compression technologies
- Service automation: improve back-office services of monitoring, alerting and reporting.

Benefits

Flexibility

Our service is available 24x7 and you can restore your data whenever you choose. The system intelligently checks your protected data against the backup vault and backs up only the data that has changed. This reduces the load on your servers and network and keeps the backup window to a minimum. When restoring, the backup software intelligently recreates the required data set from the vault.

Transparent pricing

We offer a tiered, standard pricing model allowing you to back up any amount of data up to 2TB. Higher allowances are available via preferred pricing plans. The service is billed simply on 'protected data', i.e. the size of the largest daily backup over the course of a month; there is no complex data transfer model.

Comprehensive reporting

We provide comprehensive email reporting on your backup status. You can check online to see if your backup has completed successfully. Our portal also allows you to view backup logs for each backup process and keep track of storage quotas.

Eliminate Capital Costs

Our Backup as a Service solution powered by Veeam Cloud Connect eliminates the need for you to incur any capital costs. You benefit from our highly-redundant, 100% uptime network and certified technicians.

Full Visibility & Control

Veeam makes it easy to access and recover your data from a single portal. Set up, manage, configure, fine-tune and test backups straight from your existing Veeam console. You can even effortlessly create scheduled incremental backups to your repositories. No need to install new software.

Why APH

APH is a managed IT services provider, which means we understand better than anyone else the relationship between your technology, your people, and your business goals. Our role is to function as your IT department, at precisely the levels of support and input you require.

If you are looking for an enterprise level backup solution delivered by industry experts, look no further. APH Cloud Backup has the features, the redundancy, and the reliability you are looking for. Our engineers have worked long and hard to deliver top-of-the-line, best-of-breed solutions, and that's exactly what we deliver.

• Expertise. APH has over 30 years of experience in managing compute and data environments for commercial and public-sector organisations across the UK.

• Traditional and hybrid experience. APH is one of the few providers that can fully understand both your legacy storage environment and the impacts of cloud, hybrid and as-a-service compute and storage models.

• Security. APH provides end-to-end security expertise to protect your data, offering three levels of data protection, from replication to full disaster recovery. We can deliver APH Backup as a Service in the most highly secure environments.
