

Security Assessment

It's important to establish a baseline and close existing vulnerabilities. When was your last assessment?

Date: _____

Spam Email

Secure your email. Most attacks originate in your email, our CloudProtect for Mail service will help to reduce spam and your exposure to attacks on your staff via email.

Passwords

Apply security policies on your network. Examples: Deny or limit USB file storage access, enable enhanced password policies, set user screen timeouts, and limit user access.

1 in 5 small businesses will suffer a cyber breach this year.

Security Awareness

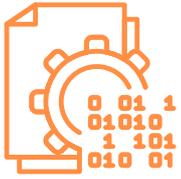

Train your users - often! Teach them about data security, email attacks, and your policies and procedures. We offer a web-based training solution and "done for you" security policies.

Advanced Endpoint Detection & Response

Protect your computers data from malware, viruses, and cyberattacks with advanced endpoint security. Today's latest technology (which replaces your outdated antivirus solution) protects against file-less and script-based threats and can even rollback a ransomware attack.

Multi-Factor Authentication

Utilise Multi-Factor Authentication whenever you can including on your network, banking websites, and even social media. It adds an additional layer of protection to ensure that even if your password does get stolen, your data stays protected.

Computer Updates

Keep Microsoft, Adobe, and Java products updated for better security. We provide a "critical update" service via automation to protect your computers from the latest known attacks.

Dark Web Research

Knowing in real-time what passwords and accounts have been posted on the Dark Web will allow you to be proactive in preventing a data breach. We scan the Dark Web and take action to protect your business from stolen credentials that have been posted for sale.

Web Gateway Security

Internet security is a race against time. Our CloudProtect for Web detects threats as they emerge on the internet, and blocks them on your network within seconds – before they reach the user.

Mobile Device Security

Today's cybercriminals attempt to steal data or access your network by way of your employees' phones and tablets. They're counting on you to neglect this piece of the puzzle. Mobile device security closes this gap.

Firewall

Turn on Intrusion Detection and Intrusion Prevention features. Our service will manage and monitor your network perimeter to safeguard your IT Systems.

Encryption

Whenever possible, the goal is to encrypt files at rest, in motion (think email) and especially on mobile devices.

81% of all breaches happen to small and medium sized businesses.

Backup

Our 3-2-1 backup strategy, 3 copies of your data, 2 copies of your data local on your premises on different media and 1 offsite to ensure business continuity with fast and secure recovery to prevent data loss.

Cyber Insurance

If all else fails, protect your income and business with cyber damage and recovery insurance policies.

97% of breaches could have been prevented with today's technology.
